Sensors installation time: 20 min

 **Measure**
Operation mode area: 240x240cm
Shipping Box: 127x96x100cm

 **Weight**
MT Basic 200kg
MT Simulator and Eagle 250kg

MTS System

MTS is a software developed by our engineers capable of playing any onboard video, where you can save on a telemetry master track. This means that you can load any circuit (track and road) and motorbike you want. Once Master Track Telemetry has been saved, the following riders must replicate the video in the most faithful way to the reference telemetry. The goal is to replicate as much better as you can the telemetry of the onboard video. The MTS software will analyze the rider's performance by monitoring the accelerator, front and rear brakes, gearbox and trajectories. It is possible to choose the number of laps.

Based on the difficulty level set between beginner, intermediate, expert and rider, if the error is greater than allowed, the MTS software will stop the lap showing a crash and the error log. When the rider performs the exercise correctly, MTS software will show the telemetry results at the end of the lap giving a score based on the correctness of the rider's performance. This result will be added to a ranking.

* **Compatible with Xbox and Pc games**
